

Is My Tree Infested by the Emerald Ash Borer? *Agrilus planipennis*

Is my tree an ash tree? Does it have...

Opposite Branching Compound Leaves 5 to 11 Leaflets

I think my ash tree may be infested with Emerald Ash Borers.

I think I have seen an Emerald Ash Borer (EAB).

Emerald Ash Borer Japanese Beetle
Six-spotted Tiger Beetle Polydrusus Weevil

Insects not to scale

Does my ash tree have the symptoms of EAB infestation?

Epicormic Shoots Bark Splits Canopy Dieback Woodpecker Damage Serpentine Galleries D-Shaped Holes

Contact a specialist to report EAB (newpest@ncagr.gov).

Treat or protect ash trees on your property.

This ash tree was treated for emerald ash borer.

Stop the spread of EAB. Don't move firewood from site to site.

Look for purple prisms to detect future EAB infestations.

Join the ash seed collection campaign (http://www.nsl.fs.fed.us/geneticconservation_ash.html)
